QA Testing Report — PR Form & Inquiry Forms

Prepared by: Suraj Navigire | ISTQB CTFL Certified QA Engineer

Applied Position: Senior Manual Tester | Submission: 15 May 2026

Executive Summary

70	65	5	54	5
Total Test Cases	Passed	Failed	Bugs Found	High Severity

Testing covered all PR inquiry and contact forms across the Moris Media website. Key findings include widespread input validation failures — name fields accepting numeric values, emojis, and special characters without restriction. Similar patterns were found across multiple form types, suggesting shared component-level validation gaps.

QA Observations & Recommendations

#	Observation / Recommendation	Type
OBS_001	Multiple inquiry forms use similar reusable components and validation logic. Similar validation issues were reproducible across forms.	Observation
OBS_002	Name fields should restrict numeric values, emojis, and special symbols to improve data quality.	Recommendation
OBS_003	Minimum and maximum character validation should be implemented consistently for text area fields.	Recommendation
OBS_004	Phone number field should restrict negative values and scientific notation inputs such as 'e'.	Recommendation
OBS_005	Phone number length restriction should be implemented to prevent invalid long inputs.	Recommendation
OBS_006	Email validation messaging should clearly differentiate between required field validation and invalid format validation.	Recommendation
OBS_007	Dropdown fields should display proper 'No Results Found' validation instead of silently closing.	UX Improvement
OBS_008	Search functionality behavior is inconsistent across dropdown fields. Some dropdowns provide visible search boxes while others do not.	UX Observation
OBS_009	City fields should restrict numeric-only and symbol-only inputs.	Recommendation
OBS_010	Minimum word validation mentioned in placeholder text should be enforced programmatically.	Validation Observation
OBS_011	URL fields should be validated strictly to prevent invalid or malformed links.	Recommendation
OBS_012	Input sanitization should be improved to prevent acceptance of unsupported special characters and emojis.	Security Observation
OBS_013	Validation consistency across all inquiry forms can improve overall user experience and data accuracy.	Recommendation
OBS_014	Success and validation messages can be made more user-friendly and descriptive.	UX Improvement
OBS_015	Loading indicator/spinner during form submission can improve user feedback experience.	UX Improvement
