Bug Report — Exploratory QA Testing

Prepared by: Suraj Navgire | ISTQB CTFL Certified QA Engineer

Platform: Mobile Application | Testing Type: Exploratory & Functional

Executive Summary

37	10	24	3
Total Bugs	High Severity	Medium	Low

Exploratory testing of the PureHire mobile application revealed 37 defects across functional, UX, and validation categories. Critical issues include a missing logout functionality (security risk), weak email validation allowing invalid formats, and missing field-level error highlighting. The application requires significant validation hardening before production release.

Bug Report

Bug ID	Title	Summary	Type	Severity	Priority
PH_01	Verify First Name / Last Name fields accept invali...	Name fields accept invalid characters and excessive length, leading to incorrect data storage and UI...	Functional	Medium	Medium
PH_02	Logout functionality missing; "Switch Account" opt...	Logout option is not available; only "Switch Account" is shown and is inconsistently accessible	UX / Functional	High	High

PH_36	Close button not working in History panel on mobil...	Clicking the close (X) button in History panel does not close the panel	Functional / UX	Medium	High
PH_37	Support option causes black screen and does not op...	Clicking on Support makes the screen go blank without loading the support interface	Functional / UI	High	High

Key Recommendations

1. Implement server-side and client-side email format validation with RFC-compliant regex.
2. Add a clearly visible Logout button in the main navigation / side menu.
3. Highlight specific invalid fields in red on validation errors — not just a generic message.
4. Add character restrictions on Name fields (alphabetic only, 2–50 characters).
5. Implement proper OTP expiry handling with user-visible countdown timers.
